

DO YOU HAVE

Hard Water?

Let's Find Out

- Do you notice white water spots on your dishes?
- What about on the bottles in your shower?
- Does your hair feel dry and brittle?
- Does your color fade quicky?
- Do you feel like no matter how much you scrub up, your hair is never clean or soft feeling?

IF YOU MARKED YES TO 2 OR MORE OF THESE QUESTIONS, YOU LIKELY HAVE HARD WATER!

WHY IS HARD WATER

Bad?!

IT CAUSES BUILDUP

Buildup of excess minerals weigh your hair down, make your strands feel dry, more brittle, and cause damage!

IT INTERFERES WITH YOUR COLOR

Causing it to become dull, faded, and discolored (we're looking at you on this one, blonde)

LONG-TERM EXPOSURE MAY ALSO CAUSE IT TO BECOME LESS MANAGEABLE

DON'T STRESS!

We've Got This

OPTION 1:

INVEST IN A SHOWER FILTER!

Showerheads are specially designed to cut out all of those gross mineral mixtures, including calcium sulfide, zinc, copper, and chlorine, thus protecting your hair from their damaging effects

we've linked our two favorite shower filters [here](#) and [here](#).

OPTION 2:

SCHEDULE AN IN SALON TREATMENT!

We'll start out by using a clarifying treatment to remove excess product buildup and follow it up with a conditioning mask specifically for your hair type to replenish the nutrients your hair may have been otherwise missing.

SHOWER FILTERS AND TREATMENTS MAY SEEM LIKE AN UN NEEDED EXPENSE , BUT THEY COULD TRULY SAVE YOUR LOCKS!

WHICH IS BEST

For You?

WE ARE HERE FOR YOU

By now, you likely have a good grasp on if you have mineral buildup and you know your options. If you're still just not sure on which solution is best for you, we are here for you! Send us an email, DM, or ask at your next visit!

HAPPIER HAIR DAYS ARE HEAD, WE PROMISE.

XO,

Uplifted Salon
